

Technical Data Sheet

#1010 QuartzGuard

Interior & Exterior Silicate Dispersion
Paints & Stains for Concrete, Stone, Bricks, Concrete Block,
Lime and Cement Mortar, Plaster and Drywall

Properties

#1010 QuartzGuard is a highly durable interior & exterior silicate dispersion paint due to its vapour-permeability and chemical bonding with the substrate. It is non-combustible, fire retardent, washable and bonds & cures after penetrating the substrate and petrification of the quartz binder. QuartzGuard is 96% mineral-sourced in a water base, a property which makes it odourless within hours (zero VOCs) and gives it microcrystalline properties of natural stone. it doesn't blister or peel, is water-repellent and dries to matt finish with a life expectancy of 20 years.

Where to use

#1010 QuartzGuard Silicate Disperson Paint can be used on most rigid and absorbent exterior and interior wall surfaces. Ideal are mineral-based surfaces such as concrete, lime & cement plaster (stucco), brick, stone or old powdery stucco, if it has been solidified by a mineralizing coat of #1050 PrimaSil. Not suitable for wood (not stable), plastic, metal (not absorbent) and floors (too much abrasion).

Important for proper product performance is a proper preparation of the substrates:

- The substrate must be chemically neutral or alkaline, free of dust and fatty or other separating substances. If necessary or as a precaution, power-wash with TSP solution.
- Loose or powdery particles from weathered mineral surfaces must be removed or stabilized with 1 coat of PrimaSil or a 1st coat made of #1010 Quartz-Guard diluted with up to 10 % #1050 PrimaSil .
- Old paint coats that restrict the surface absorbency must be removed, i.e. old glossy latex and alkyd paints have to go ideally @ 80-100%. Old Lime

Manufactured by: PermaTint Limited 100 Bradwick Dr., Concord, ON, L4K 1K8 www.permatint.com, info@permatint.com, 866.850.TINT (8468)

paints can be compatible but should be checked for adherence. Very absorbent surfaces must be primed & saturated with 1 coat of #1050 PrimaSil .

Colours white and 10 standard full-tone

colours , white is tintable with #1010 full-tone colours, custom tinting is available with a minimum volume

requirement per colour.

Coverage approx. 300 - 320 sq ft. per gallon

(varies with surface material, texture and

pre-treatment).

Drying Time Depending on the temperature and the

relative humidity, dry to touch after 2 hrs, but allow min.12 hrs before

applying 2nd coat.

Application Stir well before using. Do not apply @

working temperatures (surface + air) below 5°C or above 45°C. Apply 2 coats by brush, roller or airless sprayer after

proper surface preparation.

Final coat to be applied continuously wet-in-wet especially when using stronger tinted colours. Ideally to be

sprayed.

Wash tools with warm water and

soap.

Storage Keep containers tightly sealed in a

cool, dry and frost-free place. Shelf life is min. 24 months in unopened

containers.

Safety Keep out of reach of children.

Do not empty wet paint into drains or water courses, but let dry and discard solid leftover with regular garbage. Use goggles & protective gear when

working overhead.

Ingredients

Cleaning

water, potassium silicate, mineral fillers & extenders, earthen & mineral pigments, < 5 % a crylic stabilizer, a mmonia solution, polysaccharide, cellulose, sodium phosphonate, fatty acid defoamer, hydrophobing agent

Technical Data Sheet

#1010 QuartzGuard

General Preparation

Surfaces must be rigid & absorbent , dry, clean and free of dust, oily residues and chemically neutral or alkaline. Remove any loose particles and make good with cementitious filler. Old coats of latex or alkyd paints must be removed, since they inhibit penetration of the silicate binder into the substrate and vapour-permeability. Flaking or peeling paints must be removed completely.

Carefully protect all adjacent glass, metal, ceramic etc against splatters. Remove unavoidable splatters immediately withwater.

Note

Silicate Paint products are alkaline. (pH = 8.5 - 9.5)

Old Exterior Lime & Cement Stucco and other highly absorbent Mineral Surfaces

Remove loose particles, solidify remaining semiloose mineral particles from mortar plaster, adobe, concrete or unglazed bricks with 1-2 coats (as needed) of #1050 PrimaSil straight or with a 1st coat prepared out of #1010 QuartzGuard and up to 20 % #1050 PrimaSil

New Exterior Concrete, Mortar Stucco etc. Make sure surfaces are fully cured, i.e. min. 30 days old at time of painting. Remove or neutralize any oily residues such as forms release agents, etc.

Apply 1 Primer coat of #1010 QuartzGuard diluted with 10% #1050 PrimaSil plus two coats of #1010 QuartzGaurd exterior/interior silicate mineral paint.

Breathability

Technically breathability is measured as
Water Vapour Permeance and it can be
expressed in US-perms or in Metric perms.

Comparative Data:

1 coat of latex paint = 1.2 US-perms.

2 coats of latex paint = 0.7 US-perms.

2 coats of #1010 QuartzGuard = 77.5 US-perms.

This means a standard 2 coat application of our Interior & Exterior Silicate Dispersion Paint has approximately 100 X the Water Vapour Transmission rate of a 2 coat Latex Paint and is in the same range as house wraps, which are especially designed for optimal water vapour permeance.

RESISTANCE AGAINST PENETRATING RAIN IS EQUALLY IMPORTANT, WHEN PAINTING EXTERIOR SURFACES.

An independent US - test labratory from Brooklynn, NY has tested the "Resistance against Wind-driven Rain" in accordance with ASTM D 6940 on #1010 QuartzGuard Interior & Exterior Silicate Dispersion Paints and Stains.

Test Results:

#1010 QuartzGuard complies with the qualitative requirements stated in US Federal TT-C-555B "Coating, Textured for interior and exterior masonry surfaces." -3.3.3 Resistance against wind-driven rain, from which ASTM D 6940 has been derived.
